

Address Standardization

We have the ability to perform postal address standardization for you. And, there is no minimum address count requirement or maximum limit to the number of addresses we can process at one time. Using our services you can keep your addresses up to date just as if you had the standardization software yourself!

It's very easy to get started. All we have to do is determine the file type and field layout that you have, and then set up some procedures. From then on all you have to do is follow the instructions.

We will return to you the standardized data, a CASS report, and a standardization summary report.

Our goal is to make address standardization very affordable so you can keep your data clean all of the time! Remember, standardization encodes your addresses with postal data allowing you to qualify for better rates when you process your mailing. It has a direct effect on your mailing costs!

Please contact us if you need more information or you are ready to get started.

Thank you!
